■ Boca Bearing Gives You More Choices and Better Value ■

Choose the type of replacement bearing that matches your engine and application requirements

— Econo-Power Engine Bearings —

Boca Bearing offers a full range of Econo-Power style Engine Replacement Bearings. These bearings are similar to the type that the manufacturer supplies both as original equipment and replacements, however, at Boca Bearings we give you more bearing choices and considerably lower prices. Most Econo-power bearings come equipped with two metal dust covers (designated ZZ) or they can be purchased with two rubber seals (2RS). We recommend that either one or both dust covers be removed to provide maximum lubrication in situations where fuel is acting as a lubricate. All individual engine bearings and bearing sets are furnished with easy to follow installation instruction.

— High Speed, High Heat Engine Bearings —

If you're looking for longer life and better performance, we recommend our High Heat style bearings. These bearings feature a non-metallic retainer available in either a Polymite Plastic (TH9) or phenolic Fiber (THB) which provide the following benefits:

1. Non-metallic retainers are generally molded resulting in a one-piece construction which allows them to run at higher RPM ratings than the standard replacement type bearings.
2. Boca Bearing's Non-metallic style retainers provide increased protection against corrosion.
3. Non-metallic retainers feature a C3 fit which allows for heat expansion around the balls for freer ball rotation.

We recommend the Phenolic style retainer as your first choice (if they're available) and the Polymite Plastic as an alternative.

— Boca Bearing's Renowned Ultra-Seal Bearings —

Boca Bearing's Ultra-Seals are frictionless, sealed and shielded bearings which are double sealed for complete protection against outside contaminants. One of their unique features is that they are supplied pre-lubed and therefore, require no further lubrication. These bearings are ideal for situations where the engine in question is experiencing leakage problems through the front bearing. Since Ultra-Seals (designated UU) are pre-lubed and don't require external lubrication, they provide an effective and low-cost solution.

— Ceramic Bearings —

Ceramic bearings will last 3 to 5 times longer than standard bearings under normal usage. The ceramic bearings are easily lubricated and retention of heat is almost non-existent. You will be able to use them at higher speeds and at cooler operating temperatures.

— Engine Bearing Installation and Care Tips —

Listed below are answers to the most frequently asked questions that deal with the installation and care of your bearings and engines.

1. When the fuel is acting as a lubricant, the large crankshaft bearing should be open on both sides. The small crankshaft bearing should have one shield left in place, whenever possible.
2. When installing High Speed, High Heat non-metallic bearings, face the black or brown side toward each other. Do not attempt to take out retainers, black or brown side that looks like a shield.
3. When you receive bearings with two metal dust covers (ZZ) the recommended method of removing a shield is to take an awl or sharp metal pointed tool, punch down lightly on the shield toward the outer race until a small hole appears, then lift up. Please note that punching down too heavily may cause internal damage to the bearings. When installing High Speed bearings there are no shields to be removed.
4. Removing old bearings is best accomplished by heating the housing containing the bearings in a conventional oven at 350° F for approximately 5 to 10 minutes. Since most housings are made of aluminum they will expand at a faster rate than the bearings, allowing the bearings to drop out of the housing with little or no effort. It may require some light taping. You should repeat the process if you do not succeed at your first attempt. **DO NOT USE EXCESSIVE FORCE AS THIS MAY CAUSE DAMAGE TO BOTH THE BEARING AND ENGINE.**
5. Installation of new bearings should take place at the same session you're removing the old bearings, as the housing will be hot. We suggest placing the new bearings in a ZipLock bag and putting them in the freezer overnight to allow the metal to contract. This will facilitate the installation process. When installing Phenolic (THB) style bearings we recommend that the housing should be allowed to cool down slightly to avoid causing any damage to Phenolic material.
6. If you're uncomfortable replacing engine bearings contact your local hobby shop or talk to a knowledgeable hobbyists or fellow club member. If you can not find anyone to assist or guide you, please give us a call and we will endeavor to recommend a service that can do the job for you.
7. Maintenance and care of your engine's bearings is of the utmost importance. Rust is the most common problem, however, with the intelligent care and the use of highly quality additives such as our Midas Touch products, it can be kept in check. Remember to store your engine in an area which is as humidity free as possible. Always perform periodic inspections on all moving parts.

REWARD PAID

We are always looking for new bearing information not listed in this edition of our Engine Bearing Cross Reference Guide.

Just call, write or e-mail us to see if we have the new engine bearing information on file. If we don't, we'll request that you forward us a copy of the parts manual if available or accurate measurements of the existing bearings. Once received, we will send you a gift certificate to use on your next purchase of any Boca Bearing products.

For more information, please call 800-332-3256 or visit us at www.bocabearings.com

MIDAS TOUCH

L U B R I C A N T S

Midas Air Power

Specially formulated for R/C Airplane, Heli and Ducted Fan engines. Use Midas Touch when installing new bearings or to preserve your existing bearings. Recommended as an after-run oil or a glow fuel additive. Comes in an easy to use squeeze bottle.

1 oz\$5.95 4 oz\$13.95

Midas Road Power

Today's hot gas powered cars can really tear up the track, whether it's on-road or off-road. They can also wreck havoc on unprotected engine bearings which is why winning drivers use Midas Road Power. Comes in an easy to use squeeze bottle.

1 oz\$5.95 4 oz\$13.95

Midas Heli Rotor Grease

Bonds to the metal to create a nearly friction-free surface. Improves performance by reducing heat, extending tail rotor life and resisting corrosion. For best result, hand apply Midas Air power to all metal surface then grease the tail rotor.

2 oz\$7.95 6 oz\$13.95

Midas Clean Touch Ball Bearing Cleaner

A great and safe way to clean all your bearings. Midas Clean Touch is tetra-chloride and silicone free. For best results, submerge the bearings in Midas Clean Touch for 30-minutes. Next, remove the bearings and either blow dry with compressed air or allow to drip dry before treating the clean bearings with Midas Pre-soak or any of the Midas Touch Lubricants. Available in an economical 4 oz. size.

4 oz\$6.95

Midas Marine Power

Marine environments are particularly hard on metal surfaces which is why you need Midas Touch to protect your bearings. Whether you're an offshore racer, scale builder or backyard boater, Midas Touch will keep your bearings shipshape.

1 oz\$5.95 4 oz\$13.95

Midas Touch Wheel Bearing Pre-Soak Solution

Specially formulated for treating standard R/C car and truck wheel bearings. begin by soaking bearings in mineral spirits or brake cleaner for 1/2 hour, blow bearings dry with compressed air. Next, submerge bearings in Pre-Soak for 30 minutes. Allow the bearings to drip dry and then apply your favorite Midas lubricant.

1 oz\$5.95 4 oz\$13.95

Midas Marine Cable Grease

Bonds to the metal to create a nearly friction-free surface. Improves performance by reducing heat, extending cable life and resisting corrosion. For best result, begin by soaking your clean cable in Marine Power and allow to dry overnight.

2 oz\$7.95 6 oz\$13.95

High Speed, High Heat Bearing Instrument Oil

Our High Speed, High Instrument Oil is the ideal lubricant for all your R/C Car and truck Wheel Bearings. With an operating temperature range from minus 50°F to plus 400°F and a viscosity of 1875/9CS, it's simply the best instrument oil you can buy. Available in either a 5cc or 12cc seal-lock syringe.

5cc.....\$6.95 12cc.....\$13.95

All Boca Bearing lubricants come with a 30-Day Money Back Guarantee.

If you are not satisfied with the product, return the unused portion with your sales slips.
